

Surya Kiran Juthuka

Web Designer & Developer, UI/UX Engineer

PROFILE

I'm passionate about web development, interactive design, and UI/UX design. I see it everywhere, even in technology I use on a daily basis, and I'm constantly learning from good design that I see in my daily life. I am determined to produce the highest possible quality of work, and I'm willing to work and learn as much as I need to in order to make that happen. I love what I do, so learning, designing, and developing never feels like work.

JOB EXPERIENCE

Optimal Partners | 09.2014 – present

WEB DESIGNER + DEVELOPER

- » Fulfills all web design and development needs in quickly-growing higher education IT recruitment and education company.
- » Redesigned company website and identity, and developed it using PHP, HTML5, CSS3, and JQuery.
- » Created a dynamic recruitment application which integrates with Zoho Recruit in order to show all available positions and consultants on the Optimal Partners website.
- » Makes frequent additions and expansions to company website, as well as the WordPress-based Optimal Partners blog.

Plum Direct Marketing | 03.2014 – 09.2014

WEB DEVELOPER

- » Designed/developed landing pages and major website updates.
- » Independently designed and developed a complex internal system to help salespeople manage requests for client landing pages, including a log-in system and sortable dashboards.
- » Created a web-based tool that automated the creation of landing pages.

Dtex Systems | 04.2015 – 09.2015

UI/UX ENGINEER

- » Designed and developed a keyword management system (KMS) for use within the Dtex Systems product. This KMS has a backend based in Elastic Search instead of a traditional database. It was developed with PHP as a serverside programming language, which interacts with and brings in data from Elastic Search.

DEGREE PROJECT

Masters Project | 2015 Fall Semester

CSEL LAB DYNAMIC APPLICATION

- » The project is an application for Concurrent Systems Engineering Laboratory at University of Massachusetts Dartmouth, which enables the user add, remove, edit, and manage his publications, journals, etc. on a public-facing website.
- » The front end is built with AngularJS, while the backend is Elastic Search.
- » The application was created using the latest workflow management tools.
